CIBUZZ – PRODUCT DESCRIPTION

Global poultry demand is expected to rise by approximately 39% by 2030 and milk demand is at an expected rise of 34% just by 2024. With the increasing demand, measures have to be taken to ensure adequate supply. Livestock management and maintenance faces some challenges with respect to maintaining health and nutrition of the animal. Science has opened new channels for improving animal health care and livestock productivity.

Cibuzz is one unique animal probiotic formulated as per the needs of different livestock animals. Cibuzz probiotics improve health and overall immunity of animals. It also reduces the need for using excess antibiotics. It enhances growth in animals used for meat.

According to a study, pork is the widely consumed meat in the world followed by beef, poultry and mutton. With these stats it becomes important for farmers to rear healthy animals without compromising on livestock productivity. Cibuzz is a purpose built multi strain feed probiotic that contains viable and naturally occurring microbes. These microbes belong to GRAS (Generally Recognized As Safe) category. These microbes work on the concept of competitive exclusion, thereby curbing the propagation of deleterious pathogens.

CIBUZZ – OVERALL BENEFITS ON LIVESTOCK ANIMALS

- Helps in absorption of fats, proteins, and carbohydrates
- Improves Feed Conversion Ratio (FCR) of the animals
- Replenishes the balance of microbiota in the intestine
- Colonization of pathogenic bacteria in gut is prevented
- Prevents destruction of intestinal flora caused due to antibiotic treatment, diseases or poor diet

CIBUZZ ENHANCES CATTLE PRODUCTIVITY IN FOLLOWING WAYS
